

The need for thinner and more efficient Passenger Car Motor Oils.

EERSTA ACCEL™ ENERVA™ line of efficient grade passenger car motor oils are targeted for fuel economy. Driven by increasingly stringent environmental emission controls and the pressure to reduce fuel consumption, many vehicle manufacturers are pushing the limits and adopting thinner SAE grade oils.

Japanese car manufacturers have traditionally led the requirements in this area of low-viscosity motor oils. In fact, there are already some hybrid vehicles which specifies an engine oil with a viscosity grade of 0W-8. To meet this demand, EERSTA Lubricants is introducing a new product;

EERSTA ACCEL ENERVA 0W-8

Meets the Specification of: JASO GLV-1

This motor oil is specially formulated to lower fuel consumption, provide maximum engine wear protection, and well-suited for hybrid powered petrol engines (mainly Japanese vehicle manufacturers), which are equipped with the latest technology.
